

Lecture 2:

MS Word: Tables, Objects, Page Layout & Proofing Tools

Tables, Columns & Lists · Images, Shapes, Charts & Hyperlinks · Header/Footer & Watermark · Spelling, Grammar & Thesaurus

Learning Outcomes

- Recall Lecture 1's hardware foundations, and shift from how a computer works to how it is used for everyday document creation.
- Insert and format a table, and use columns and lists to organise text on a page.
- Insert images, shapes, and charts, and control how text wraps around them.
- Insert a hyperlink linking to a web page, an email address, or a place within the same document.
- Add a header, footer, and page numbers, including a different first page.
- Add a text or picture watermark to a document.
- Use spell check, grammar check, and the thesaurus to proofread a document.
- Answer short, medium, and long-answer (up to 15 marks) examination questions on this topic with full explanations and examples.

1 Recap — From Computer Fundamentals to Practical Office Tools

This lecture shifts focus entirely to the software side of everyday computing: MS Word, one of the most widely used pieces of application software in the world, used to create, format, and proofread documents.

Important Point for Exams

This lecture is practical and procedural — examiners commonly ask you to describe the exact steps to perform a task (“explain how to insert a table”) or to differentiate between two similar features (“differentiate between a header and a footer”). Learn both the concept AND the exact ribbon tab or shortcut used for each feature.

2 Overview — Where to Find These Features

MS Word organises its features into a set of ribbon tabs across the top of the window. Almost everything in this lecture lives under one of five tabs.

MS Word Ribbon				
Home Tab Bulleted, Numbered & Multilevel Lists	Insert Tab - Table, Pictures, Shapes, Chart - Link, Header, Footer, Page Number	Layout Tab Columns	Design Tab Watermark	Review Tab Spelling & Grammar, Thesaurus

Fig 2.1 — Where each feature in this lecture is found on the MS Word ribbon.

3 Working with Tables

A **table** is an arrangement of information in the form of **rows and columns**. The intersection of a row and a column is called a **cell**. Tables are used to present information in a systematic, organized, and easy-to-read form.

For example:

Roll No.	Name	Course	Marks
101	Amit	B.Sc.	78
102	Neha	B.Sc.	85
103	Rahul	B.Sc.	72

Creating a Table

A table can be created using the following steps:

1. Place the cursor where the table is required.
2. Click the **Insert** tab.
3. Click **Table**.
4. Select the required number of rows and columns.
5. The table will be inserted into the document.
6. Enter the required information into the cells.

Important operations on tables

1. Adding Rows and Columns:

New rows or columns can be inserted into an existing table using the **Table Layout** options.

2. Deleting Rows and Columns:

Unwanted rows, columns, or the entire table can be deleted.

3. Merging Cells:

Two or more cells can be combined into a single cell. This is useful for creating headings.

4. Splitting Cells:

A single cell can be divided into multiple rows or columns.

5. Changing Row Height and Column Width:

The size of rows and columns can be adjusted according to the content.

6. Table Alignment:

A table can be aligned to the left, center, or right side of the page.

7. Borders and Shading:

Borders, colours, and shading can be applied to make a table more attractive.

8. Sorting:

Information inside a table can be arranged alphabetically or numerically.

Uses of Tables

Tables are commonly used for:

- Timetables
- Mark sheets
- Attendance records
- Price lists
- Comparison of data

- Schedules
- Reports

Action	How To
Insert a table	Insert tab → Table → drag across the grid to choose rows/columns, or use Insert Table for an exact size.
Add a row or column	Click inside the table → Layout tab → Insert Above/Below/Left/Right (or right-click and choose Insert).
Merge cells	Select the cells to combine → Layout tab → Merge Cells.
Split cells	Click inside a cell → Layout tab → Split Cells → choose the number of rows/columns.
Change the table's style	Click inside the table → Table Design tab → choose a built-in style.
Sort table data	Select the data → Layout tab → Sort → choose the column and order.
Add a row/column total	Click in the target cell → Layout tab → Formula → =SUM(ABOVE) or =SUM(LEFT).
Important Point for Exams Once a table is inserted, two special contextual tabs appear only while your cursor is inside the table: Table Design (for borders, shading, and style presets) and Layout (for inserting/deleting rows and columns, merging cells, and sorting). Examiners sometimes ask which tab a specific table action belongs to.	

4 Working with Columns

Columns are vertical sections into which the text of a document can be divided. Instead of text occupying the entire width of a page, it can be arranged into two or more vertical sections.

Columns are commonly seen in:

- Newspapers
- Magazines
- Newsletters
- Brochures
- Advertisements

Example

Normal text:

Computers have become an important part of modern life. They are used in education, business and communication.

Two-column layout:

Column 1

Computers are widely used in education and research.

Column 2

They are also used in banking, communication and business.

Steps to Create Columns

1. Select the text to be arranged into columns.
2. Click the **Layout** tab.
3. Click **Columns**.
4. Select the required option:
 - One
 - Two
 - Three
 - Left
 - Right
5. Select **More Columns** for additional settings.

More Columns option allows the user to control:

- Number of columns
- Width of each column

- Space between columns
- Line between columns

Advantages of Columns

- Improve document appearance.
- Make text easier to read.
- Save page space.
- Give documents a professional newspaper or magazine-style layout.

Action	How To
Apply columns to the whole document	Layout tab → Columns → choose One, Two, Three, Left, or Right, or More Columns for a custom number, width, and spacing.
Apply columns to only part of a document	First select the text, or insert a Section Break (Layout tab → Breaks → Section Break), then apply Columns — this keeps the rest of the document unaffected.

5 Working with Lists

A **list** is a method of arranging related items in an organized sequence. MS Word provides different types of lists to make information clear and easy to understand.

The three major types are:

1. Bulleted List

A **bulleted list** uses symbols before each item.

Example:

- Keyboard
- Mouse
- Monitor
- Printer
- Scanner

Bulleted lists are useful when the **order of items is not important**.

2. Numbered List

A numbered list uses numbers or letters to arrange items in sequence.

Example:

1. Start the computer.
2. Open MS Word.
3. Create a document.
4. Save the document.
5. Close MS Word.

Numbered lists are useful when **order or sequence is important**.

3. Multilevel List

A multilevel list contains different levels and sublevels.

Example:

1. Hardware
 1. Input Devices
 2. Output Devices
2. Software
 1. System Software
 2. Application Software

It is useful for creating:

- Chapters
- Topics and subtopics
- Outlines
- Reports

Steps to Create a List

1. Select the required text or place the cursor at the desired position.
2. Open the **Home** tab.
3. Go to the **Paragraph** group.
4. Select **Bullets**, **Numbering**, or **Multilevel List**.
5. Choose the required style.

Types of Lists		
Bulleted List • Order does NOT matter	Numbered List • Order/sequence matters	Multilevel List • Nested, hierarchical information

Fig 2.2 — The three list types available on the Home tab.

Type	When to Use	Example
Bulleted List	The order of items does not matter	A shopping list
Numbered List	The order or sequence matters	Step-by-step instructions
Multilevel List	Information has nested levels, like an outline	A document's table of contents structure

6 Inserting Images

An **image or picture** is a graphical element that can be inserted into a document to improve its appearance and explain information visually.

Steps to Insert an Image

1. Place the cursor at the desired location.
2. Click the **Insert** tab.
3. Click **Pictures**.
4. Select the required image source.
5. Select the image.
6. Click **Insert**.

After inserting an image, various formatting operations can be performed.

Image Formatting Options

Resize: Change the height and width of an image.

Crop: Remove unwanted portions of an image.

Rotate: Turn the image in different directions.

Picture Styles: Apply borders, shadows, and other visual effects.

Wrap Text: Determines how text appears around an image.

Common text-wrapping options include:

- In Line with Text
- Square
- Tight
- Top and Bottom

- Behind Text
- In Front of Text

Images are useful in reports, assignments, certificates, brochures, project reports, and educational documents.

Wrap Style	What It Does
In Line with Text	The image is treated like a large text character and moves along with the surrounding text.
Square	Text wraps around the image in a rectangular box shape.
Tight	Text wraps closely around the image's actual outline/shape.
Behind Text	The image sits behind the text, acting like a background.
In Front of Text	The image sits on top of the text, potentially covering it.
Important Point for Exams Access text wrapping either by right-clicking the image and choosing Wrap Text, or via the small Layout Options button that appears next to a selected image. "In Line with Text" is the default when an image is first inserted.	

7 Inserting Shapes

Shapes are predefined graphical objects that can be inserted into a document.

Examples include:

- Rectangle
- Circle
- Triangle
- Arrow
- Line
- Star
- Callout
- Flowchart symbols

Steps to Insert a Shape

1. Click **Insert**.
2. Select **Shapes**.
3. Choose the required shape.
4. Click and drag the mouse on the document.
5. The shape will appear.

Formatting Shapes

A user can change:

- Shape colour
- Outline colour
- Outline thickness
- Size
- Position
- Rotation
- Shadow and effects

Text can also be added inside many shapes.

Uses of Shapes

Shapes are useful for creating:

- Flowcharts
- Diagrams
- Organizational charts
- Process representations
- Posters
- Notices

8 Inserting Charts

A **chart** is a graphical representation of numerical data. Charts make it easier to understand, analyze, and compare numerical information.

For example, marks obtained by students in different subjects can be represented using a chart.

Common Types of Charts

1. **Column Chart:** Uses vertical bars to compare values.
2. **Bar Chart:** Uses horizontal bars to compare values.
3. **Line Chart:** Shows changes or trends over a period of time.
4. **Pie Chart:** Shows how different parts contribute to a whole.
5. **Area Chart:** Shows the magnitude of change over time.

Steps to Insert a Chart

1. Click **Insert**.
2. Select **Chart**.
3. Choose the required chart type.
4. Click **OK**.
5. Enter or modify the data in the data sheet.
6. The chart will automatically update.

Uses of Charts

Charts are used for:

- Comparing marks
- Showing sales figures
- Presenting survey results
- Showing population data
- Scientific data
- Financial reports

Chart Type	Best Used For
Column / Bar	Comparing values across different categories

Line	Showing a trend or change over time
Pie	Showing how a whole is divided into proportions

Editing a chart: double-click the chart at any time to reopen its data sheet and update the values; the Chart Design and Format tabs let you change the chart's style, colours, and labels.

9 Inserting Hyperlinks

A **hyperlink** is a clickable text, image, or object that takes the user to another location.

A hyperlink may connect to:

- A website
- Another document
- An email address
- Another location within the same document

For example, clicking the University **Website** may open the university's webpage.

Steps to Insert a Hyperlink

1. Select the text or image.
2. Click the **Insert** tab.
3. Click **Link/Hyperlink**.
4. Enter or select the destination.
5. Click **OK**.

The selected text normally appears coloured and underlined.

Shortcut

Ctrl + K is commonly used to insert a hyperlink.

Uses of Hyperlinks

Hyperlinks are useful for:

- Connecting documents to websites
- Providing references
- Creating interactive documents
- Linking different sections of large documents
- Providing email links

Destination Option	Used For
Existing File or Web Page	Linking to a website address or another saved file
Place in This Document	Jumping to a heading or bookmark elsewhere in the same file
Create New Document	Linking to a brand-new file that will be created
E-mail Address	Opening the reader's email program, ready to send a message

By default, text hyperlinks usually appear underlined and in a different colour (commonly blue) to show they are clickable.

10 Header, Footer & Page Numbering

A **Header** is the area at the **top margin of a page** in which information can be displayed repeatedly.

A **Footer** is the area at the **bottom margin of a page** in which information can be displayed repeatedly.

Information placed in a header or footer normally appears automatically on multiple pages.

Information commonly placed in a Header

- Document title
- Chapter name
- Organization name
- College name
- Logo

Information commonly placed in a Footer

- Page number
- Author name
- Copyright information
- Date
- Confidentiality notice

Steps to Insert Header

1. Click **Insert**.
2. Click **Header**.
3. Select a suitable design.
4. Enter the required text.
5. Close Header and Footer.

Steps to Insert Footer

1. Click **Insert**.
2. Click **Footer**.

3. Select the required style.
4. Enter the information.
5. Close Header and Footer.

Importance

Headers and footers make long documents more **organized, professional, and easy to navigate**.

Term	Meaning
Header	Content that repeats at the TOP of every page — commonly a document title or chapter name.
Footer	Content that repeats at the BOTTOM of every page — commonly a page number, date, or confidentiality notice.
Action	How To
Insert a header or footer	Insert tab → Header or Footer → choose a built-in style, or Edit Header/Footer to customise.
Insert page numbers	Insert tab → Page Number → choose a position (top, bottom, or margin) and a number format.
Make the first page different	With the header/footer open, on the Header & Footer Design tab, tick “Different First Page” — useful so a title page has no header.
Different odd and even pages	Tick “Different Odd & Even Pages” on the same tab — useful for book-style, double-sided layouts.

Page Numbering

Page numbering is the process of assigning numbers to the pages of a document in a systematic sequence.

Examples:

1, 2, 3, 4...

or

i, ii, iii, iv...

Steps to Insert Page Numbers

1. Open the **Insert** tab.
2. Click **Page Number**.
3. Select the required location:
 - Top of Page
 - Bottom of Page

- Page Margins
 - Current Position
4. Select a page-number style.
 5. Page numbers will be inserted automatically.

Page Number Format

The **Format Page Numbers** option can be used to:

- Change number format.
- Use Roman numerals.
- Start numbering from a particular number.
- Continue numbering from a previous section.

Importance

Page numbers are particularly important in:

- Books
- Assignments
- Project reports
- Dissertations
- Research reports
- Official documents

They make it easier to locate and reference information.

11 Watermark

A **watermark** is faint text or a faded image displayed behind the main content of every page, commonly used to indicate a document's status or ownership — for example, the words “DRAFT” or “CONFIDENTIAL,” or a company logo.

Type	Description
Text Watermark	Typed words, displayed diagonally across the page by default (e.g. “CONFIDENTIAL”, “DRAFT”).
Picture Watermark	An image, automatically faded (“washed out”) so it does not obscure the document's text.

Steps to Insert a Watermark

1. Open the **Design** tab.
2. Click **Watermark**.
3. Select a predefined watermark.

OR

Select **Custom Watermark** to create a customized watermark.

A watermark may contain:

- Text
- Image/logo

Uses of Watermarks

Watermarks are used to:

- Indicate document status.
- Mark confidential documents.
- Identify draft documents.
- Display organization branding.
- Discourage unauthorized copying.

12 Spell Check, Grammar Check & Thesaurus

Spell Check is a proofreading feature of MS Word that identifies words that may have been spelled incorrectly.

For example:

Computr ✖
Computer ✔

MS Word normally indicates possible spelling errors using an underline or Editor indication.

Steps to Check Spelling

1. Open the **Review** tab.
2. Select **Spelling & Grammar** or **Editor**, depending on the Word version.
3. Word identifies possible errors.
4. The user can select an appropriate suggestion.

The user may choose options such as:

- Change/Accept
- Ignore
- Ignore All
- Add to Dictionary

Shortcut Key

F7 is traditionally used to start spelling and grammar checking.

Advantage

Spell Check helps reduce typing and spelling mistakes and improves the quality of a document.

Grammar Check is a proofreading feature that detects possible grammatical problems in a document.

It may identify problems related to:

- Sentence structure
- Punctuation
- Capitalization
- Subject-verb agreement
- Word usage
- Writing style

For example:

She are going to college. ❌

Word may suggest:

She is going to college. ✅

Steps

1. Open the **Review** tab.
2. Select **Editor** or **Spelling & Grammar**.
3. MS Word displays possible grammatical problems.
4. Review the suggestion.
5. Accept or ignore it as appropriate.

A **Thesaurus** is a tool that helps users find **synonyms and related words** for a selected word.

A **synonym** is a word having the same or nearly the same meaning as another word.

For example:

Beautiful → **Attractive, Pretty, Lovely**

Big → **Large, Huge, Enormous**

Happy → **Glad, Cheerful, Pleased**

Steps to Use Thesaurus

1. Select the required word.
2. Open the **Review** tab.
3. Click **Thesaurus**.
4. Related words and synonyms will appear.
5. Select an appropriate alternative.

In many versions of Word, the shortcut is:

Shift + F7

Uses of Thesaurus

It helps:

- Improve vocabulary.
- Avoid repetition of words.
- Find more suitable words.
- Improve writing quality.
- Make reports and assignments more professional.

Tool	What It Does	How to Access
Spell Check	Flags words not found in the dictionary with a red wavy underline; right-click a flagged word for suggested corrections.	Automatic while typing; F7 or Review tab → Spelling & Grammar for a full check
Grammar Check	Flags potential grammar or style issues with a blue (or green, in some versions) wavy underline.	Automatic while typing; F7 or Review tab → Spelling & Grammar for a full check
Thesaurus	Shows synonyms (words with a similar meaning) for a selected word.	Review tab → Thesaurus, or right-click a word → Synonyms

Important Point for Exams

Remember the colour coding:
red wavy underline = spelling;
blue (or green) wavy underline
= grammar.

F7 is the standard shortcut to
run a full spelling and grammar
check across the entire
document in one step.

Basis	Spell Check	Grammar Check	Thesaurus
Purpose	Finds spelling errors	Finds grammatical issues	Finds synonyms/related words
Example	Computr → Computer	She are → She is	Big → Large
Main use	Correct spelling	Improve sentence correctness	Improve vocabulary
Review needed	Yes	Yes	Yes
Common shortcut	F7	F7/Editor	Shift + F7

13 Full Recap — Feature Location Table

Feature	Ribbon Tab	Key Action
Table	Insert	Insert → Table
Columns	Layout	Layout → Columns
Lists (Bulleted/Numbered/Multilevel)	Home	Home → Bullets / Numbering / Multilevel List
Images	Insert	Insert → Pictures
Shapes	Insert	Insert → Shapes
Charts	Insert	Insert → Chart

Hyperlinks	Insert	Insert → Link (Ctrl+K)
Header / Footer	Insert	Insert → Header / Footer
Page Numbering	Insert	Insert → Page Number
Watermark	Design	Design → Watermark
Spelling & Grammar	Review	Review → Spelling & Grammar (F7)
Thesaurus	Review	Review → Thesaurus

14 Putting It All Together — A Worked Example

Consider a student formatting a college newsletter before it is printed and distributed:

Step	Feature Used	What Happens
1	Table	A table is inserted to create an events schedule/timetable grid.
2	Columns	The main article text is arranged into two newspaper-style columns for a professional layout.
3	Bulleted List	Key highlights of the month are listed at the top of the page.
4	Image	The college logo is inserted with Square text wrapping, so the article text flows neatly around it.
5	Shape	An arrow shape is added to draw attention to an important announcement.
6	Chart	A pie chart is inserted to display last year's event attendance figures.
7	Hyperlink	The words "Read more" are linked to the college's website.
8	Header, Footer & Page Number	The newsletter's title is placed in the header, and a page number is added to the footer.
9	Watermark	A faint "DRAFT" watermark is added while the newsletter is still awaiting approval.
10	Spell Check	The full article text is reviewed using Spelling & Grammar before the final version is printed.

This single practical task uses every feature covered in this lecture, showing how they combine to produce a single polished, professional document.

15 Fill in the Blanks

- 1. To insert a table in MS Word, you use the _____ tab.
- 2. Newspaper-style text layout is applied using the _____ feature, found on the Layout tab.
- 3. A list where the order of items does not matter is called a(n) _____ list.
- 4. To wrap text tightly around the exact outline of an image, you would choose the _____ wrapping option.
- 5. Clicking a(n) _____ takes the reader to a web page, another file, or a place within the same document.

- 6. Content that repeats at the top of every page is called the _____, while content at the bottom is called the _____.
- 7. Faint text or an image displayed behind a page's main content, often reading "DRAFT" or "CONFIDENTIAL," is called a(n) _____.
- 8. Misspelt words are usually underlined in _____, while potential grammar issues are underlined in _____.
- 9. The keyboard shortcut to run a full spelling and grammar check in MS Word is _____.
- 10. The tool that suggests synonyms for a selected word is called the _____.

Answers

1. Insert | 2. Columns | 3. Bulleted | 4. Tight | 5. Hyperlink | 6. Header, Footer | 7. Watermark | 8. Red, Blue (or green) | 9. F7 | 10. Thesaurus

16 True or False

- 1. Once a table is created, its number of rows and columns can never be changed.
- 2. Applying columns to just part of a document requires inserting a section break first.
- 3. A numbered list is best used when the order of items matters.
- 4. Choosing "Behind Text" as a wrap style places an image on top of, and covering, the document's text.
- 5. A hyperlink can only link to a page on the internet, not to a place within the same document.
- 6. Page numbers are inserted from the Insert tab in MS Word.
- 7. A watermark can be made from text or from a picture.
- 8. Running a full spelling and grammar check in MS Word can be triggered using the F7 key.

Answers with Explanation

- 1. False.** Rows and columns can be added or removed at any time using the Layout tab's Insert/Delete options.
- 2. True.** A section break allows column formatting to apply to only part of a document, leaving the rest unaffected.
- 3. True.** Numbered lists are used precisely when the sequence of items matters.
- 4. False.** It is the reverse: "Behind Text" places the image behind the text; "In Front of Text" places it on top, potentially covering the text.
- 5. False.** A hyperlink can also link to a place within the same document, an email address, or another file, not only web pages.
- 6. True.** Insert tab → Page Number is where page numbers are added.
- 7. True.** MS Word supports both text watermarks and picture watermarks.
- 8. True.** F7 is the standard shortcut for a full spelling and grammar check.

17 Short Answer Questions (2–3 Marks)

- What is the purpose of using columns in a document? (2 marks)
- Differentiate between a bulleted list and a numbered list. (2 marks)
- What is text wrapping? Name any two wrap styles. (3 marks)
- Differentiate between a header and a footer. (2 marks)
- What is a watermark, and why is it used? (2 marks)

- Differentiate between spell check and grammar check. (3 marks)
- How would you insert a hyperlink linking to a place within the same document? (2 marks)
- What is a multilevel list, and when would you use one? (2 marks)
- Name two ways to change a table's design or style once it has been inserted. (2 marks)

18 Long Answer Model Answers (5, 10 & 15 Marks)

The following are fully written model answers. Use these as a template for structure, depth, and the level of explanation expected in your own exam answer — do not simply memorise them word for word; practise writing them in your own words using the same structure.

Q1 (5 Marks): Explain how to insert and format a table in MS Word.

A table is inserted by going to the Insert tab and selecting Table, then either dragging across the grid to choose the number of rows and columns, or using the Insert Table dialog box to specify an exact size. Once the table is placed in the document, the cursor being inside it reveals two special contextual tabs: Table Design and Layout.

The Table Design tab is used to change the table's overall appearance, offering built-in styles that instantly apply borders, shading, and colour schemes. The Layout tab is used to modify the table's structure: rows and columns can be inserted or deleted, cells can be merged (combined into one) or split (divided into more), the data can be sorted, and simple formulas such as =SUM(ABOVE) can total a column or row of numbers. Together, these two tabs let a table be built and styled entirely without leaving the document.

Q2 (10 Marks): Explain the different text wrapping options available when inserting an image, with examples of when each would be used.

Once an image is inserted into a document, its text wrapping style determines how the surrounding paragraph text behaves around it. This can be changed by right-clicking the image and choosing Wrap Text, or via the Layout Options button that appears beside a selected image.

Wrap Style	What It Does	Example Use
In Line with Text	The image behaves like a large text character and moves with the surrounding text.	A small icon placed directly within a sentence
Square	Text wraps around the image in a rectangular box shape.	A photo beside a paragraph in a newsletter
Tight	Text wraps closely around the image's actual outline.	An irregularly shaped logo with text flowing around its edges
Behind Text	The image sits behind the text, like a background.	A faded design element behind a title page's text
In Front of Text	The image sits on top of the text, potentially covering it.	A stamp or sticker-style graphic placed deliberately over text

In conclusion, "In Line with Text" is the simplest option and is applied by default, while Square and Tight are the most commonly used styles for professional documents such as newsletters and reports, since they let text flow naturally around an image without overlapping it.

Q3 (10 Marks): Explain the steps to add a header, footer, and page numbers to a document, including how to make the first page different.

A header is content that repeats at the top of every page, such as a document title, while a footer is content that repeats at the bottom, such as a page number or date. Both are added from the Insert tab: selecting Header or Footer offers a choice of built-in styles, or Edit Header/Footer can be used to type custom content directly.

Page numbers are added separately via Insert tab → Page Number, where a position (top of the page, bottom of the page, or in the margins) and a specific number format can be chosen, such as a plain number or “Page X of Y.”

To make the first page different — for example, so that a title page has no header or footer at all — the header or footer area must first be opened by double-clicking it, which reveals the Header & Footer Design tab. Ticking the “Different First Page” checkbox on this tab allows the first page's header and footer to be left blank or styled differently from the rest of the document. A similar “Different Odd & Even Pages” option exists for book-style, double-sided layouts.

In conclusion, these three features work together to give a document consistent, professional page furniture, while still allowing flexibility for special pages such as a cover page.

Q4 (15 Marks): Describe, step by step, how you would format a college newsletter using tables, columns, lists, images, shapes, charts, hyperlinks, headers/footers, watermarks, and spell check, explaining the purpose of each feature used.

Producing a polished college newsletter draws on almost every feature studied in this lecture, each solving a specific formatting need.

Feature	Purpose in the Newsletter
Table	Creates a clear events schedule/timetable grid, keeping dates and times aligned.
Columns	Arranges the main article text into newspaper-style columns for a professional, magazine-like appearance.
Bulleted List	Presents the month's key highlights as a short, scannable list at the top of the page.
Image	Displays the college logo, with Square wrapping so the surrounding text flows neatly around it.
Shape	Draws an arrow or callout box to visually highlight an important announcement.
Chart	Shows last year's event attendance figures as a pie chart, more effectively than a table of raw numbers.
Hyperlink	Links the words “Read more” directly to the college's website for further information.
Header, Footer & Page Number	Places the newsletter's title in the header and a page number in the footer, on every page.
Watermark	Adds a faint “DRAFT” watermark while the newsletter is still awaiting approval, removed before final printing.
Spell Check & Grammar Check	Reviews the entire article for spelling and grammar errors before the newsletter is printed and distributed.

Working through these steps in order — structuring content first with tables, columns, and lists, then enriching it with images, shapes, and charts, then adding hyperlinks and finishing page furniture like headers and watermarks, and finally proofreading with spell check — mirrors exactly how a real document is professionally prepared.

In conclusion, no single feature could produce a complete, polished newsletter alone; it is the combination of structural tools (tables, columns, lists), visual tools (images, shapes, charts), navigational tools (hyperlinks), page furniture (headers, footers, watermarks), and proofreading tools (spelling and grammar check) working together that produces a professional final result.

19 Exam Tips

- Memory trick for ribbon locations: “Home has Lists, Insert has almost everything else (Table, Pictures, Shapes, Chart, Link, Header/Footer, Page Number), Layout has Columns, Design has Watermark, Review has Spelling/Grammar/Thesaurus.”

- For “differentiate” questions (header vs footer, bulleted vs numbered list, spell check vs grammar check), always answer using a table — it is faster to write and easier for the examiner to award marks clearly.
 - For “explain how to...” questions, always answer as a numbered, step-by-step sequence, naming the exact ribbon tab and button at each step — exactly like the model answers in Section 18.
 - Common Mistake: Do not confuse “Behind Text” with “In Front of Text” — Behind Text hides the image behind the words; In Front of Text can hide the words behind the image.
 - Common Mistake: Do not say a hyperlink can only point to a website — remember it can also point to a place in the same document, an email address, or another file.
 - Always mention the keyboard shortcut where one exists (Ctrl+K for hyperlinks, F7 for spelling and grammar) — examiners often award a mark specifically for naming the shortcut.
 - For 10 and 15 mark questions, structure your answer with a clear paragraph or table per feature, exactly like the model answers in Section 18 — examiners reward clear structure over long, unstructured paragraphs.
-
